i. introduction

1. Purpose of the Report

In carrying out its responsibilities under the Planning Act, the Edmonton Metropolitan Regional Planning Commission finds frequent need for up-to-date population statistics for the planning region and its constituent municipalities. These areas are shown on Map 1. In addition to its own requirements, the Commission is often asked to supply population data to its member municipalities, senior government departments and agencies, professionals in related planning fields, the business community and the general public. This report, in two volumes, addresses these needs, by providing basic population data from the 1986 federal census, as well historical data. Vital statistics are also updated to where possible.

2. Content of the Report

The report addresses such topics as: total population and population change for the 1961 through 1986 period; vital statistics and estimated net migration for the 1971 through 1986 period; marital status for 1976, 1981 and 1986; and the age/sex composition also for 1976, 1981 and 1986. For some communities - Beaumont, Bon Accord, Calmar, Gibbons, Legal and New Sarepta - vital statistics are available for only part of the 1971 to 1986 period.

3. Organization of the Report

This report is presented in two volumes. The first of these is titled "Edmonton Metropolitan Region Population Study - Trends and Characteristics. It contains, in Part II, a number of definitions followed by Part III in which can best be described as a series of profiles. One profile is presented for each of the province, the region and the region's constituent municipalities (or parts thereof in the case of the Counties of Leduc and Parkland). Each profile consists of two tables containing a variety of statistics as described previously. For a complete reference, the reader is also advised to consult the statistics contained in the second volume. The tables are preceded by a brief text, highlighting these statistics according to the following headings: Population Change; Components of Growth; Marital Status; and Age Distribution. Age/sex pyramids are also provided as graphic illustrations for the years 1976 and 1986.

The profile for the Edmonton Metropolitan Region is unique in this report, in that it also includes a brief discussion of the student, armed forces, penal institution and Indian Reserve populations. The County of Strathcona profile includes separate statistics for Sherwood Park and the rural part of the County, where available. The profiles for Alberta and the Edmonton Metropolitan Region are followed in alphabetical order by those for the cities, towns, villages, the municipal district and counties.

Report #2 contains: a brief introduction (Section I); a list of definitions (Section II); and tables which reproduce those statistics contained in Report #1, but in a format which facilitates the comparison of data for one municipality with that for the Region or another municipality (Section III). Some additional, more detailed statistics, such as annual vital statistics and rates for the 1971 to 1986 period are included in the second volume. These are referred to, but not reproduced in Report #1.

The reader is advised to consult both reports and should be aware that, for some communities, the small number of events, such as births and deaths, and the small population base, may inflate the size of the calculated rates. Similarly, in small populations, the random rounding procedure influences the shape of the age/sex pyramids.

E.M.R.P.C. PLANNING AREA

ii. definitions

1. Definitions

The following definitions will assist the reader in understanding the contents of both volumes of this report:

- crude birth rate: the number of live births in a given year per 1,000 population.
- crude death rate: the number of deaths in a given year per 1000 population.
- median age: that age which divides the population in half, one half being older, the other being younger.
- natural increase: the number of births minus the number of deaths.
- net migration: total population change minus natural increase. If positive, the volume refers to net in-migration; if negative, the value refers to net out-migration. If a boundary change occurred during the period, the change in population associated with the boundary change is included in the net migration estimate.
- rate of natural increase: the volume of natural increase per 1000 population.
- infant mortality rate: the number of deaths in a given year to babies for less than 1 year in age, per 1,000 live births in that year.

iii. comparative statistics

Strathcona County	12,075	16,185	25,735	42,278	51,579 ^d	49,802
(Rural Part Only)	9,152	9,846	11,453	15,744	22,294 ^d	19,616
Sherwood Park	2,923	6,339	14,282	26,534	29,285	30,186
M.D. of Sturgeon 90	17,837	15,926	10,975	12,861	17,410 ^d	14,019

NOTE: Municipalities containing a federal penal institution may include a larger portion of the inmate population in the municipal census count than does the federal census.

E.M.R.P.C. Region figures do not include the population living on Alexander and Stony Plain Indian Reserves. The following represents selected statistics available for these areas.

	Alexander Reserve	Stony Plain Reserve
1971	392	359
1976	349	479
1981	394	600
1986	834	512

The 1986 figure for Alexander Reserve is a December figure obtained from Alberta Indian Affairs. All others are from the Census of Canada.

Source: Compiled from Census of Canada data.

(a) Incorporated January, 1973; for previous years, population included with County of Leduc.

(b) Incorporated after 1961; 1961 population included with M.D. of Sturgeon.

(c) Estimate

(d) These figures are not adjusted for a major annexation effective January 1, 1982. The 1981 figures, adjusted to account for the annexation to Edmonton and Leduc County are as follows:

Edmonton City.....	541,992
County of Strathcona.....	47,869
Rural Part.....	18,584
County of Parkland.....	22,966
Metro Region Part.....	12,596
Municipal District of Sturgeon.....	13,734
County of Leduc.....	13,289
Metro Region Part.....	8,317

NOTES: (a) Crude Birth Rate equals the number of births per 1,000 population.

(b) Crude Death Rate equals the number of deaths per 1,000 population.

(c) Infant Mortality Rate equals the number of infant deaths per 1,000 live births.

(d) Rate of Natural Increase equals the difference between births and deaths, per 1,000 population.

(e) Blank indicates the data are not available.

(f) Estimate prepared by E.M.R.P.C.

NOTE: The data in this table refer only to vital statistics registered in Alberta to residents of Alberta. Vital events occurring elsewhere to Albertans, and vital events occurring in Alberta to non-Albertans are excluded. The data are also available only for urban places of greater than 1000 population. Some estimates have been made for other areas to enable the calculation of a regional total.
